

Commitment to Restore Sound & Trustworthy Government

Stop the illegal immigrant invasion

Finish the wall, install detection equipment, and finally resume the legal immigration policies. Return to the “Remain in Mexico” policy. Impose a significant fine for those who are caught entering illegal that includes immediate return to their country. Stopping the influx will also effectively aid in the slowing of Fentanyl into our country. This will also serve to disrupt the horrors of human trafficking that have resulted from the open border, as well as defend against those who would harm our nation from being able to enter our country.

Election Integrity

Return to single day elections, with limited mail in ballots to those in the military, out of country, or physically incapable of being in person to vote. Photo ID required. No one who is not a legal citizen of the United States will be allowed to vote in any federal election.

Return to Energy Independence

The policies of the Biden administration have greatly harmed our country as well as hurt us financially. To depend on foreign countries when we have the capacity to be energy independent is insane. We are capable of transitioning in reasonable areas to a cleaner energy but it must not be by the elimination of petroleum-based products.

End Human Trafficking

While stopping the mass invasion of our border will greatly help here, it must not be the sole means to ending this human travesty. For too long America has been the chief consumer in human trafficking with what most likely includes many well identifiable Americans. This horror must be eradicated. As stated Gods, children are not for sale.

Establish Government Transparency

There are few who trust many of the offices in our nation’s federal system. The FBI in my opinion have acted improperly if not criminally over the past several years, as has the DOJ, and the IRS. There must be a thorough review with proper action being taken to insure that what has taken place over the past several years never happens again, even if it means replacing any of them with a new means of providing America’s safety.

A Valid January 6 investigation

While we hear the word insurrection thrown around by the leftists in America, it is my firm belief that was not what took place on January 6. Video footage that would clear criminal charges and bring true light to what took place that day must be released. Individuals like Nancy Pelosi, General Millie and several other possibly connected must be investigated. The Capital Policeman who in my view murdered Ashley Babbitt must be held accountable.

Return to Military Soundness (including our veterans)

Our military has been decimated by the policies of both Barack Obama and Joe Biden. We must remove all the woke policies including forced vaccinations and social governance imposed policies and return to being the number one military force in the world. This may require replacing leadership that conforms to the past harmful polices. Moreover, our veterans deserve

our immediate help. Terrible numbers daily are committing suicide. This has to stop, and moneys used for illegals needs to be shifted to helping veterans.

Downsizing Federal Agencies

There are several agency's within our Federal Government that fall outside the scope of power that belong to the Federal Government, one such being the Department of Education. All of these agencies need to be eliminated shrinking the footprint of the Federal Government to its intended role. Many of these agencies have obstructed the 10th amendment rights of the states. Wasteful programs must be done away with. We cannot continue to spend the way we do.

Abortion

The recent overturn of Roe v Wade by our Supreme Court made it clear that federally, abortion is not a protected right. The issue is a States rights issue, and thus should be resolved by the people of each of our 50 states. While I am unapologetically pro-life, I recognize that the proper application of government is for the will of the people. I would hope with all the medical evidence available to us today through 4D ultrasounds that more compassionate decisions would be arrived at. Adoption is one such option.

Protect our Electrical grid

Few realize the clear danger to our nation's electrical grid. The recent incursion of the Chinese balloon, had it of had an explosive force attached to it could have knocked out key portions of our nations electric services. An EMP would leave millions powerless, and if it were a well-orchestrated attack, to as few as a half dozen locations nationally could leave most of the nation powerless. We must harden our Electrical power grid.

Term Limits

We say we want them, but not for our representative because they may have gotten us something. The limit of one's service must not be left to emotion. Logic would say that for various reasons, be it age, mental acuity, or simply that any person left in power to long usually tends to lose the vision of their voting constituents in favor of a power broker mentality. The time for Term Limits has long been with us.
